

**APPENDIX 5.** Differences in girth measurements by community members and professional foresters based on comparison of individual trees in those sites where trees were individually marked.

<b>Country, area (site number)</b>	<b>Girth mean<sup>†</sup> (cm)</b>	<b>S.D.</b>	<b>Skewness</b>	<b>Kurtosis</b>
Laos, Sakok (d-e)	-0,59	2.1	-3.0	9.2
Vietnam, Diem (f)	-0.03	1.6	-3.6	15.4
Vietnam, Moi (g-i)	-0.14	1.5	-3.1	12.1

<sup>†</sup>The mean difference between community tree girth measurements and forester girth measurements. Negative values indicate a higher measurement among professional foresters.
