

Appendix 4. Bivariate relationships between compliance and involvement in MPA decisions (A), type of MPA (B), being a fisher or not (C), effectiveness of government efforts against illegal fishing (D), tourism levels (E), MPA size (F), and support towards MPA (G). Values on Y-axis of panels A-G and X-axis of panels D-G are z-scores (see Methods section). Note that these figures do not show the marginal relationship between variables shown in Figure 1 (model output).
